

## Project Experience Oil and Gas

### Project information

**location** Various countries  
**client** Oil and Gas Industry  
**project** New construction and maintenance

**climatic conditions** Cold to hot weather

**substrate** Bare steel and old coating

**surf. Preparation** St 2 and 3  
 WAB, WC and UHP  
 Sa 2 and Sa 2,5

*Worldwide many oil, gas and chemicals tanks were successfully coated with our innovative 2 layer coatings system and also with the typical three layer coatings system. So far is MCU Coatings the best paint system for overcoating of old paints because of its higher flexibility of the coating that avoids stress and blistering of the original paint overcoated during the drying process of the new applied paint. MCU-Coatings' fast project completion time and high durability are well appreciated by many contractors and also the high intrinsic chemical resistance of MCU-Coatings that avoids damage of the coating during spills.*

#### **system**

Primer: MCU-Miozinc  
 Final coat: MCU-Miotopcoat / MCU-Topcoat

Some projects with MCU-Miomastic as intermediate coat
